### **E911 Phase II Location Technology Information**

#### **(1) Type of Technology**

MSA Developmental Group, Inc. ("MSA Group") is the cellular licensee of Station KNKR212. MSA Group is in the process of identifying a Phase II solution that will fully satisfy the Commission's timetable and accuracy requirements. Thus, MSA Group has not selected the location determination technology to be employed for implementing Phase II enhanced 911 service. MSA Group intends on continuing its efforts to identify in the very near future the technology that will bring Phase II E911 service to its subscribers in the shortest possible timeframe. MSA Group will submit an update to its Phase II report once it selects its location determination technology.

#### **(2) Testing and Verification**

Because it had not selected the location determination technology to be employed for implementing Phase II enhanced 911 service, MSA Group has not conducted any tests of Phase II technology. MSA Group will adopt testing and verification methods and procedures based on sound engineering and statistical practices. This testing and verification will likely be incorporated into routine testing of the wireless network by company technicians.

#### **(3) Implementation Details and Schedule**

MSA Group's strategy will be to purchase the required equipment (hardware and software) and services on the competitive market and deploy the same in accordance with the Commission's rules. MSA Group will notify the FCC of a specific schedule for implementation once a vendor

has been chosen. MSA Group recognizes that the Commission's rules require the deployment of a Phase II system, even if none exists which fully meet the Commission's accuracy requirements.

(4) PSAP Interface

MSA Group will incorporate any required industry standards. MSA Group will transmit the data through the public switched telephone network to the PSAP following industry standards adopted by the service supplier providing E911 service to the PSAP.

(5) Existing Handsets

Since MSA Group has not selected its location determination technology, this section is therefore not applicable.

(6) Location of Non-Compatible Handsets

Since MSA Group has not selected its location determination technology, this section is therefore not applicable.

(7) Other Information

Not Applicable.
